IA 1040 Return - Fillable Version

The fillable IA 1040 does the math for you and automatically creates a computer generated barcode on the return. The barcode allows the return to process faster than a handwritten paper return.

Because the computer generates the barcode, all entries on the fillable IA 1040 must be made on the computer before the return is printed.

If you need to make changes to the return, update the fillable form and reprint. All information you keyed into the form is reflected in the barcode.
Handwritten information is not captured. Any information written on the return after it is printed will not be reflected in the barcode.

Print two copies of the return; one for your records and one to mail in.

IA 1040 Return – Blank form

Use this form if you would like to enter data on the return yourself.

Consider using the fillable version instead. It automatically computes the return for you and creates a computer generated barcode on the return. The barcode allows the return to process faster and more accurately than a handwritten paper return.
